

## **Trash Receptacle Policy**

The governing documents of our community require that all trash/recycling receptacles be stored in the garages of the home or if stored outside, they must be screened in an enclosure. Enclosures should be "L" shaped in order to screen the receptacles from the street and the adjacent neighboring home. Enclosures should be 4 feet in height and can be wood or vinyl, solid or lattice. There are many existing enclosures close by that you can refer to for ideas.
